

A B S T R A C T

A method and device for use in the replacing of liquid in a riser (12) of the kind used in the recovery of petroleum offshore, wherein the riser (12) forms a connection between a wellhead (4) on or above the sea floor (6) and a drilling vessel (1), and wherein a body (30), which is arranged to keep the liquids separate, is displaced longitudinally of the riser (12).
